Summary

Computer Engineering graduate with a solid foundation in software architecture, hands-on experience in mobile application development using Flutter, and backend development using Go. Skilled in building user-focused applications, RESTful APIs, and database-driven systems. Adaptable to emerging technologies, collaborative in team environments, and committed to delivering scalable and maintainable software solutions.

Skills

C#, Python, Dart, Go, Flutter, ASP.NET Core MVC, PostgreSQL, Microsoft SQL Server, Git.

Education

2022 – 2026

- **B. Sc.** Sakarya University, Sakarya, TÜRKİYE
Faculty of Computer and Information Sciences, Department of Computer Engineering [GPA: 3.21/4]

Experience

2025	Artificial Intelligence & Network Programming Intern at CrudFab • Worked on network programming and communication protocols in the hardware unit. • Developed AI-based applications within the software department. • Contributed to data processing and model testing using Python.
2026(Feb – May)	Mobile Application Developer Intern at Kotic Bilişim A.Ş. • Developed responsive mobile user interfaces and custom widgets using Flutter and Dart for a corporate collaboration and communication platform. • Optimized application performance and asset size by converting Lottie animations to dotLottie format. • Designed secure RESTful APIs and configured CORS policies using Go and the Gin Framework within a layered software architecture. • Integrated the Dio HTTP client for robust mobile-backend communication and utilized an S3-compatible MinIO object storage system on the provided server infrastructure. • Utilized Git and GitHub with advanced branch management strategies for collaborative workflows. • Contributed to the development of the LopMeet promotional page using Flutter and the LopMeet application backend using Go. • Project: https://lopmeet.lopme.net/

Projects

2026	BLE and QR-Based Automated Attendance System (RollCall) < IoT-based smart mobile attendance system with physical proximity detection and cross-verification features > ▪ Languages, Technologies and Skills: Flutter, Dart, Go, Supabase (BaaS), PostgreSQL, Clean
------	--

	Architecture, REST API, BLE iBeacon, QR Code, Google ML Kit, Firebase Cloud Messaging. ▪ Developed a cross-platform mobile application using Flutter that automatically detects students' physical presence in classrooms. ▪ Implemented a Go-based microservice that runs the cross-verification API to match ML Kit camera-based headcounts with BLE proximity data. ▪ Integrated user data management, JWT authentication, and database-level security policies utilizing Supabase BaaS and PostgreSQL Row Level Security. ▪ Enforced security measures including a SHA-256 hashed rolling iBeacon packet structure, GPS geofencing, and hardware-based device fingerprinting. ▪ Automated push notifications for students approaching attendance limits using Supabase Edge Functions and Firebase Cloud Messaging.
2025	Smart Home System < <i>IoT-based system for real-time environmental monitoring and remote control</i> > ▪ Languages, Technologies and Skills: Arduino IDE, MIT App Inventor, ThingSpeak, NodeMCU ESP8266, Arduino Uno, DHT11, MQ-135, LDR, LED, Buzzer. ▪ Developed a smart home system that monitors temperature, humidity, air quality, and light levels using various sensors. ▪ Collected and stored real-time sensor data on the ThingSpeak platform for big data analysis. ▪ Created a mobile application that displays real-time sensor data and allows remote LED control. ▪ Implemented automatic lighting using LDR sensors and gas leak alerts to enhance safety, energy efficiency, and user comfort.
2024	Pizza Sales System < <i>Desktop application for managing pizza sales and customer orders</i> > ▪ Languages, Technologies and Skills: .NET Framework, Windows Forms, PostgreSQL ▪ Developed a desktop application using Windows Forms and PostgreSQL on the .NET Framework. ▪ Implemented features for recording customer data, selecting pizzas, creating orders, and managing orders by ID (viewing, updating, and deleting). Designed a user-friendly interface to support efficient order tracking and sales management.
2024	Hair Salon Management System < <i>Web-based system for appointment scheduling and staff management in salons</i> > ▪ Designed and developed a web-based application to manage hair salon operations and employee scheduling. ▪ Managed customer and staff information, appointment scheduling based on availability, service duration, and pricing. ▪ Prevented appointment conflicts with a validation system and integrated an approval workflow. ▪ Used REST API for database communication and designed a user-friendly interface accessible to mobile users. Languages & Technologies: ASP.NET Core MVC (.NET 6), Entity Framework Core, LINQ, REST API.
